to me

Despite bad weather in the forecast, we experienced only five minutes of rain -- just at the beginning of this trip. Aldergrove Regional Park features well laid-out trails, rolling hills, a "glacial erratic" (massive boulder deposited during the Ice Age), wetland habitat and was the site of a former rock quarry, now fully restored. After lunch in a tranquil meadow, the group proceeded to Serpentine Fen near Boundary Bay. This area, managed by Ducks Unlimited, offers bird watching from three large viewing towers and several kilometers of dike trails. We saw many varieties of ducks, plus eagles and herons.

Two great local destinations !
